                                                                                                                                   Ce The present irrention provides single-stranded oligonucleotides which can cobe used for the targeted alteration of genomic sequences, where the coligonucleotide has at least one mismatch compared with the genomic sequence to be altered. In particular, these sequences are directed at the following genes: adenosine deaminase, p3] beta-globin farected at crimbiatoma, BRCA1, BRCA2, CFTR, cyclin-dependent kinase inhibitor 2A (CONNAN), RCC, Pattor V, Pactor VIII, Rattor IX, haemoglobin alpha locus 2 (HBA1), haemoglobin alpha locus 2 (HBA1), MSH2, WSH2, WSH2, CR applipsprotectin 3 (APDE), LDL receptor (LDLR), UDP-glucuronosyltransferase (UGT1), amyloid precursor protein (APD), presentlin-1 (PSBN1), Dhese can be used in the gene therapy of diseases such as cancer, adenomine deeminase deficiency, cystic fibrosis. Contaminating the sease, melanoma, adenomatous polyposis of the colon and control of the inventions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 137

XX The Circle invention relates to a nucleic acid molecule which down regulates coresponsion of a CD20 game and a nucleic acid melecule which down crepulates expression of a market growth inhibitor game (NCOO).

Circle Mayres an incorpse (an each section because the core of the nucleic acids and by be emphasized multicle acids (e.g. a ribozyme or a CC DMAyres) an incorpse (an each section color acid cleaving a an NRH molecule concleti) pays anther property of the nucleic acid cleaving an NRH molecule concleti) pays anther you must be no concerned with a cell to reduce the collection of a division coll to reduce the collectivity of the cell and cell in the CD20 -targetting nucleic acid is used CC CD20 activity of the cell and cell in the presence of a division coll to reduce CC CD20 activity of the cell and cell to reduce the coll activity of the cell and cell to reduce CC CD20 activity of the cell and cell to reduce CC CD20 activity of the cell and cell to reduce CC CD20 activity of the cell and cell to reduce CC CD20 activity of the cell and cell to reduce CC CD20 activity of the cell and cell to reduce CC CD20 activity of the cell and cell to reduce CC CD20 activity of the cell and cell to reduce CC CD20 activity of the cell and cell to reduce CC CD20 activity of the cell and cell to reduce CC CD20 activity of the cell and cell to reduce CC CD20 activity of the cell and cell to reduce CC CD20 activity of the cell and cell to reduce CC CD20 activity of the cell and cell to reduce CC CD20 activity of the cell and cell to reduce CC CD20 activity of the cell and cell to reduce the cell to reduce CC CD20 activity of the cell and cell to reduce CC CD20 activity of the cell and cell to reduce the cell to reduce CC CD20 activity of the cell and cell to reduce the cell to reduce cell to reduce the cel

                                                                                                                                                                                                         thrombotytopaenia, and inflammatory arthropkety. The Modor-targetting uncleic acid is used to cleave RNA of the NGGO gene in the presence of a divalent cation that is preferably Mg 7±. Authormore, the nucleic acid may be contacted with a cell to reduce NGGO activity of the cell and creat a prient having a condition associated with the level of NGGO. The treatment may further comprise the use of one or more therapise.

CC In particular, the NGGO-targetting nucleic acid may be used to treat central nervous system (CNS) injury and cerebrovascular accident (CNA, CC stroke). Habiner's disease, dementia, multiple sclerosis (NS). C chemotherapy-induced neuropathy, amyotrophic lateral noterosis (NS). CC parkinson's disease, detaxia, Hamington's disease, creutzfeldt-jakob cities with the report of the modularion of NGGO expression. The cc parking of the disease and the modularion of NGGO expression. The cc present sequence is an amberzyme molecule of the invention.
                                                                                                                                                                            Sequence 17 BP; 7 A; 2 C; 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    immunocytoma (IMC), small B-cell lymphocytic lymphoma,

The invention relates to a nucleic acid molecule which down regulates expression of a CDDS and a nucleic acid molecule which down regulates expression of a CDDS and a nucleic acid molecule which down crepitates expression of a CDDS and a nucleic acid molecule which down crepitates expression and a nucleic growph inhibitor gene (MOSO).

CO DNARyme) an incorpus (an endolytic nucleic acid levels a thoolyne or a CDDR and a nucleic acid acid acid sevies a thoolyne or a consisting part and the processor of a divalent cation that is expression and the processor of a divalent cation that is expression and the processor of a divalent cation that is expressive the coll and treat a patient having a condition condition of the coll and treat a patient having a condition of the coll and treat a patient having a condition of the coll and treat a patient having a condition of the coll and treat a patient having a condition of the coll and treat a patient having a condition of the coll and treat a patient having a condition of the coll and treat a patient having a condition of the coll and treat a patient having a condition of the coll and treat a patient having a condition associated MIL, mantle-coll lymphona (MLL), immunodeficiency virus) associated MIL, mantle-coll lymphona (MLL), immunodeficiency virus) associated MIL, mantle-coll lymphona (MLL), immunodeficiency virus) associated MIL, mantle-coll lymphona (MLL), coll in uncleic acid is used to cleave mild selection that is preferably Mg 7° -. Furthermore, the nucleic acid may be used to cleave mild selection that coll to reduce MOSO gene in the presence of a two molecular colls under the coll and condition associated with the level of MOSO. The creat a patient having a condition associated with the level of MOSO. The creat a patient having a condition associated with the level of NOSO. The creat a patient with the complete the use of one more theraphes.

Condition of disease, disease, disease, disease, chards having a coll condition of MOSO expression of the second of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mucleic acid molecules, e.g., enzymatic nucleic acids and antisenee
constructs which down regulate expression of a OD20 gene or neurito
growth inhibitor gene useful for treating, e.g., lymphoma, leukenia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (RIBO-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  11-FEB-2000; 2000US-181797P

                                                                                                                                                                                                                                                                                                                                                                 profesin 1 (hGDMLP-1). The protesin and polymoclectide sequences of formula-1 can be used in open therapy and vaccine production. The hGDMLP-1 mocleic acids can be used as probes to detect, characterise and quantify hGDMLP-1 mocleic acids to samples, as amplification substraces, to provide initial substraces for the recombinant engineering

The present invention describes a human genome-derived myosin-like process in IndoMup-11. The process not bother, and be used in gene therapy and voccine production. The homely-1 nonless caride and use therapy and voccine production. The homely-1 nucleic acide can be used as probes to detect, obstracterise and quantity homely-1 nucleic acide in samples, as amplification substrates for provide initial substrates are not be recombinant engineering of homely-1 procein variants having desired phenotypic improvements, and for expressing the processes. The homely-1 processes may be used as immunogeous to rate antibodicate that specifically "roognise

The profest and polynucleoride sequences of hobMuD-1 can be used in gene thorapy, and vaccine production. The hobMuD-1 nucleic exide can be used as probes to detect, thereceasise and quantify hobMuD-1 nucleic exide as probes to detect, therefore and quantify hobMuD-1 nucleic exide as semples as emplification and production of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure; SEQ ID 10055; 214pp; English

InfoRMP-1 in the protein and polymorlockide sequences of the MBMLP-1 can be used in gene therapy and vaccine production. The combine in nucleic sciles can be used as probes to detect; characterise and quantity home. The nucleic sciles can be used as probes to detect; characterise and quantity home. The nucleic sciles in samples, as amplification and the substrates for the recombinant engineering of home. The nucleic sciles in samples, as amplification and contains having desired phenotypic improvements, and contains the used in the nucleic sciles in sample used to determine the concentration and/or amount specifically of home. The nucleic capture probes for surface enhanced laser description to bomolecule capture probes for surface enhanced laser description contains in a therapeutic supplement in patients having specific constantion, as therapeutic supplement in patients having specific constantion, as therapeutic supplement in patients having specific constantion, as therapeutic supplement in patients having specific contains in high process encoding highler have be used for therapy. The polymucleotide sequences encoding highler have be used for therapy. The polymucleotide sequences encoding highler have be used for the thought of the home. The nucleic associated with the expression of home.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

The invention relates to a nucleic acid molecule (1) which down regulates compression of an Eis-related gene (ERG). (1) is useful for treating expression of an Eis-related gene (ERG). (1) is useful for treating conditions selected from cancer. Imphona Ening serroms, melanoma, the conditions selected from cancer. Imphona Ening serroms, melanoma, the conditions selected from cancer. Imphona Ening serroms, melanoma, the condition and the conditions, for the cancer and the condition and the condition and the conditions such as for the spring port wine stains, Sturge while syndroms, Appl-1 Tenanumy where syndroms, port-wine stains, Sturge syndroms, lexicemia, octoporosis and wound healing. (1) is useful for treating a patient having a condition associated with the level of ERG, by contacting cells of the patient with (1) under conditions suitable for the treatment. The method completes the use of one or more therspites under conditions suitable for the treatment. Leakaemia or tumour candidated with the conditions and the conditions with one or more of other therspites such as radiation or conjunction with one or more of other therspites such as radiation or conjunction with one or more of other therspites such as radiation or conjunction with one or more of other therspites such as radiation or conjunction with one or more of other therspites such as reducing ERG activity in a conjunction with one conjunction with the spread of the carrier of the presence of ERG Max in a cell. (1) is useful for patient in a cation such as Mg3+. (1) is useful for diagnosis of conditions and the carrier of the presence of ERG Max in a cell. (1) is useful for patient with the specifically carrier of the presence of ERG Max in a cell. (1) is useful for patient with carrier specifically carrier specifically carrier specifically carrier specific much as call collect acid molecules which regulate expression of ERG, and entrymatic nucleic acid molecules which regulate expression of ERG, and

CC The invention relates to a nucleic acid molecule (1) which down regulates CC expression of an Res-related gene [REQD) (1) is useful for treating conditions selected from concer, lymphone, Dwing's surcoor treating CC cumour angiogenesis. Abbetic restriction, arthritis, postain, vermos CC neovascular glaucoma, myopic degeneration, arthritis, postain, vermos CC vulgaris, auglocithrons of tuberous scleropis, port-wine trains. Sturge CW weber syndrome, Napyal-Treanunay-Weber syndrome, Osler-Weber-rendu CC vulgaris, pulsamin, sceteoporosis and wound healing. (1) is useful for treating a patient having a condition associated with the level of EEG, CC by contacting cells of the patient with (1) under conditions suitable for the treatment. Landsamins or tumour angiogenesis is treated by administering (1) to the patient in conjunction with one or more of color thearings (1) to the patient of conjunction with one or more of color thearings and a relation or angiogenesis is treated by administering (1) to the patient in conjunction with one or more of color thearings and a relation or angiogenesis is treated by definished the color than a seculi for colarving REG activity in a cell, by contacting the cell with (1). (1) is useful for cleaving REG activity in a cell, by contacting the cell with (1). (1) is useful for cleaving REG activity in a cell, by contacting the cell with (1). (1) is useful for colarving REG activity in a cell, by contacting the cell with (1). (1) is useful for cleaving REG activity in a cell, by contacting the cell with (1). (1) is useful for cleaving REG activity in a cell, by contacting the cell with (1). (1) is useful for cleaving REG activity in a cell, by contacting the cell with (1). (1) is useful for colarving REG activity in a cell, by contacting the cell with (1).

                                                                                                                                                                                                                                                                                                                                                                                                                             ERG gene, by contacting (1) with RNA, in the presence of a divalent cation such as MgA+. (I) is useful for disenses of conditions and diseases related to the expression of ERG, and as disengestic tool to examine genetic drift and mutations within diseases coalis or to detect the presence of ERG RNA in a call. (I) is useful for specifically categorize that share homology with ERG gene or ERG fusion genes. ARC 17394-ARC 2719 represent models categorized, including antisense and engments nucleic acid molecules which regulate expression of ERG, and related PCR princers of the invention.

New isolated nucleic acid, useful for treating viral diseases associated with tumors and cell degeneration, also related polypeptides, antibodies and transfected cells

Disclosure; Page 667; 720pp; French.

given in the specification, a sequence containing at least 15 consecutive mucleotides from the 17 mer sequence, a sequence with, after optimal alignment, at least 0 st dentity to the 17 mer sequence, a sequence with, after consecutive mucleotides from the 17 mer sequence, a sequence with, after sequence, a sequence with sequence optimal alignment, at least 0 st dentity to the 17 mer sequence, as sequence with sequence, or the complement of any of them, or the corresponding RNA. The novel considered mucleot acids of the invention are useful as probes and primers or detecting, identifying, quantifying and/or amplifying annotate acid, considered and for production of recombinant polypeptides. Any of the mucleic acids conjugation, vectors containing the mucleic acids, collipseptides, are useful for preparation of pharmaceuticals for prevention and/or treatment of viral conference preparation, specifically cancer but also Allheimer's disease and The invention relates to a novel isolated 17 mer nucleic acid sequence,

                                                           acid molecule or an enzymatic nucleic acid molecule, that modulates expression of a nucleic acid molecule encoding HRR2, K.Ras, H.Ras, N.Ras, N. human immundedictiency virus (HIV) or a component of HIV. The nucleic acid molecule of the invention has cytostatic, anti-HIV, and anti-Theunatic activity. The nucleic acid molecules are useful for reducing HRR2, K.Ras, H.Ras, and HIV activity in a cell. The nucleic acids are also useful for treating breast, ovarian, colorestal, hung, prostate, bladder, or pancreatic cancer, and HIV infection, and AIDS. The sequences shown in ABZ565989 - ABZ66591, RES6591, according to the sequences shown in ABZ56590 - ABZ66590 - ABZ6659
                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel short interfering RNA (siRNA) nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel short interfering RNA and enzymatic nucleic acid useful for
treating cancer, modulates the expression of a nucleic acid ancoding
HER2, K-Ras, H-Ras, N-Ras, and human deficiency virus sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   29-MAY-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human, ribozyme, short interfering RNA, siRNA, HER2; K.Ras; enzymatic mucheic acid; H-Ras; N-Ras; HIV; cytostatic; anti-HIV; anti-rheumatic; cancer; AIDS; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           schizophrenia. Analysis of the expression of the 17 mer muclaic acids in pations cample is useful for disgnosts and/or prognosis of these diseases. The polypoptides can also be useful of generate antibodies, and both the polypoptide and antibodies are useful a components of protein their muclaic acid sequences of the invention can be used in gene therepy. This polymocleotide sequence represents a tumour suppression related human fubtition dishultin oil-gounceleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (RIBO-) RIBOZYME PHARM INC

                   The invention relates to a novel short interfering RNA (siRNA) nucleic acid molecule or an enzymetic nucleic acid molecule, that modulates expression of a nucleic acid molecule encoding IBR2, Kras, Hras, Nras, human immunodeficiency virus (HIV) or a component of HIV. The nucleic acid molecule of the invention has cyclostatic, anti-HIV, and for reducing HER2, Kras, Hras, Hras, nucleic acid molecules are useful for restricting HER2, Kras, Hras, and HIV activity in a cell. The nucleic acids are also useful for treating breast, volument, colorectal, lung, prostate, bladder, or parcreatic cancer, and HIV infection, and AIDS. The sequences shown in ABZ59899 - ABZ6520- ABZ66520, ABZ66530, ABZ66595 represent substrate/target sequences for the human ribozymes of the invention.
                                                                                                                                                                                                                                                                          Movel short interfering RNA and enzymatic nucleic acid useful for treating cancer, modulates the expression of a nucleic acid encoding HBR2, K-Ras, H-Ras, N-Ras, and human deficiency virus sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                     29-MAY-2001; 2001US-294140P

                                                                                                                                                                                                                                                                                        Continue requences given in ANTI1709-29 are primers which were used in CC single- extended conformational, polymorphism analysis (SSC)) of the CP polycystic kidney disease (PKDI) gene. Matericans in the pRD1 see are associated with autocomal dominant polyvystic kidney disease (PKDI) gene are responsible for approx. 90 kers of complex in the pRD1 gene is complex and extensive. It covers approx. 90 kb and contains a total of 46 exons. It has been collected on the pRD1 gene is separate to within a 750 kb chromosoma is short arm of chromosome is. Approximately the first two thirds of the pRD1 gene is given by the first two thirds of the pRD1 gene is given as a complex of the exons gene in the genome. The pRD1 gene also contains extensive repeated regions of high CC content. A number of the exon have alternatively pliced forms giving rites to a number of cold closes. The pRD1 protein contains at the pRD1 protein and/or process may be an extensive repeated regions are giving rites to a number of cold closes. The pRD1 protein contains at the pRD1 protein and/or process contains which are likely to be involved in the protein and/or process contains at the pRD1 and a process of the pRD1 gene and the deception of the pRD1 gene and a process of the pRD1 gene and the deception of the pRD1 gene gene may be used in "minit gene through the bRD1 contains at the process of the pRD1 gene gene may be used in "minit gene through the department of the PRD1 contains and process of the pRD1 to correct PM field.)

                                                                                                                                                                                                                                                                                                                                                                                                                           AA22345-84 represent phosphorothists antisense oligomucleotide which are directed against ENN (factor associated with he-Nakes activation) mRNA, ENN is a mediator of tumor necrosis factor (NNP) induced activation of #808se. The antisense oligomucleotides are 8-30 mucleotides in length. The antisense oligomucleotides are useful mucleotides in length. The antisense oligomucleotides are useful

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AMS6564 to AMS6578 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their nucleotide sequences. AMZ65979 to AMZ7440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haphotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and disposition set posses to and side effects from pharmaceutical agents acting on a disease as well as other conservations.

Minishozyme compounds useful for cleaving a target mRNA in a host cell, e.g. for treating AlDS, arthritis, atheroscierosis, restenosis, bacterial and prokaryotic infection

Example; Fig 4; 81pp; English

mulitobogymes, or oligomucleotide transfer vectors containing a nucleotide sequence encoding the minitobogyme are useful for cleaving a target mRNA in a host cell. They are especially used for treating viral diseases caused by herpes simplex virue or VIRIS and obtaining with the sequence of the property of the sequence of the sequen papilloma disease, conditions associat such as atherosclerosis and restenosis, psoriasis, cervical preneplasia, papilloma disease, bacterial and prokaryotic infection, neoplastic The specification describes miniribozyme compounds. The associated with production of aberrant RNAs such as

G-libha-12 is canomere for the G1/10 abbfamily of Proteins. The primary function of G-sipha-12 is in cell differentiation and growth. The invention relates of G-sipha-12 is in cell differentiation and growth. The invention relates of the primary function of G-sipha-12 and sibte in the invention relates of the sequence of the human of G-sipha-12. The molecules prefeably have a mittle spreasion of the human of G-sipha-12 and at least one modified supar nexty fred invention of the human G-sipha-12 RM. The repression of human of the human G-sipha-12 RM. The repression of human of the human G-sipha-12 RM. The repression of human of the human G-sipha-12 RM. The repression of human of the human G-sipha-12 RM. The repression of human of the human of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                88888888

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     chronic myoloid lewiemia. The miniribozymes may be combined with pharmaceutically or veterinarally acceptable carrières or may be supplemented in a composition with one or more mini-wiral, anti-fungal, anti-bacterial, anti-parasitic, anti-protosoan or anthelminthic agents, herbicides or pericides. AmA56861-88761 represent sequences of the N18 domain of miniribozymes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Local Similarity

                                                                                                                                                                                                                       The present invention describes an antisone compound (1) 8-10 unuloctides long targeted to a nucleic acid molecule encoding human seartin. The antisense compound comprises a phosphorethode entisone oligonucleotide which inhibite expression of presenting the vitiasues useful for inhibiting expression of seattin in human condition vitiasues in vitro, for treating humans or other animal suspected of having or being prome to a disease associated with sentria spression (1) can sequence represents a human sentrin phosphorothicate antisense

                                                                                                                                                                                                                                                                                                                                                                                       prostate greate Pilds specific expressed sequence tag (EST) CINA clones. The ESTs were used along with other overlapping clowa clones to produce a till length contensus sequence see ASDIJES. This sequence could then the used to produce see ASDIJES. This sequence could then the used to produce tissue, and as immunogens to produce the tild to greate to prostate tissue, and as immunogens to produce attribodies. The polypeptides which are useful in deseases of the polypeptide and for screening compounds which expectifically bind to the polypeptide and for screening compounds which expectingly bind to the polypeptide and for screening for drugs, compounds, or any other agent which can be used to treat diseases. C associated with PSIOS might have been the continuous as delivery agents for therapeutic agents as well a service of the produce of the polypeptide and for the produce of the polypeptide and for the polypeptide and for the polypeptide and service agents as well associated with PSIOS, especially cancer. The antibody is also useful for generating chimeric antibodies for therapeutic use, for inhibiting the continuous and the presence of any polypeptide and test sample which shares one or more antigenic determinants with the PSIOS polypeptide.
                                                                                                                                                                                                                                                                                       Matches
  Human Smad7 phosphorothicate antisense oligonucleotide SEQ ID NO:27

                                                                                                                                                                                                                                                                                                                                                                                                                                                              /note= "phosphorothicate linkages"
```

The present invention describes an antisense compound (1) of up to 31 mulabobases in length capable of ainthisting the expression of human Smad7. (1) has antisting name to year the expression of human Smad7 expression. (1) can be useful for inhibition the september of human Smad7 in human cells or tissues in vitro. (1) is september to compare the commonly used as a research respect and in disgnostics for example to controlled the function of particular geners. (1) is also useful for distinguishing research use. (1) is also useful for disposition particular the prevent of the prevent o prevent or delay infection, inflammation or tumour formation. Ansaeve to ANF26706 represent human Smad? antisense oligonucleotides from the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to detecting a genetic predisposition in a human subject for non-responsiveness to attinding treatment, involving applifying nucleic acids including but and coding or untranslated region within the 3' and of the human lippoprotein lipase (IPI) gene from a tissue sample. The method is useful for determining which patients suffering from coronary artery disease, or which coronary artery bypactering will count a respond positively to statin drug creatment with respect to stating and the stating from the respond positively to statin drug creatment with respect to stating from the stati

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       in a human subject for non-responsiveness to statin drug treatment, involving amplifying morleic acids including a non-coding or untranslated region within the 3' end of the human lipoprotein lipase (titl) gene from a tissue sample. The method is useful for determining which patients suffering from coronary attery disease, or which coronary artery bypass graft (OABG) patients, will likely not respond positively to statin drug treatment with respect to stenosis of a coronary artery bypass graft.
                                                                                                                                                                                                 (GRAN/)

                                                                                                   The present invention relates to a method of toxicological diagnosis, involving taxing a DNA-containing sample from an organism or cell culture that has been treated with a test compound and determining any changes in the DNA methylation status or pattern caused by said test compound. The method is used for diagnosis and prognosis of adverse toxic responses in individuals. The present sequence is a human sequence used to demonstrate the method of the invention.
                                                                                                                                                                                                                  Toxicological diagnosis, useful for diagnosis and prognosis of adverse reactions, based on effect of test compounds on methylation status of selected genes, involves determining changes in DNA methylation status of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to polymucleotide sequences derived from the human PSIOS gene and capable of selectively hybridising to the ESIOS gene. The sequences can be used to detect the presence of a target DSIOS polymucleotide in a test sample, and to detect, monitor, prevent or treat diseases and conditions of the proteste, such as prostate, reacher. The present sequence is a PCR primer described in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               differentiating between haematopoiseic ceil proliferative disorders associated with at least 1 gene and/or their regulatory regions in a subject. The method comprises contacting a target mucleic acid in a biological sample obtained from the subject with the sample obtained from the subject with 1 least 1 reaching the control of subject with distinguishes between methylated and non-methylated Organical discounties within the target mucleic acid, ABZ09061 to ABZ11118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Detecting and differentiating between hematopoietic cell proliferative disorders, comprises contacting a farget muleic acid with a reagent that distinguishes between methylated and non-methylated CpG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                            lymphocytic leukaemia and acute myclogenous leukaemia has probse for determining the cytosine methylation state and/or single mulcottide polymorphisms (SNEs) of haematopoietic cell proliferation disorder related sequences and their complements; and as primars for the amplification of haematopoietic cell proliferation disorder. The nucleotide expenses from the present into central the disorder related pNA sequences. The nucleotide expenses from the discretiation central also be used for detecting a predisposition to the discretiation between subclasses; disapposis, prognosis, treatment of officers and the present method enables a highly specific classification of haematopoietic cell proliferative disorders. The present method enables a highly specific classification of homotopoietic cell proliferations.
                                                                                                                                                                                                                                                                                                                                                                                      differentiating between hemetopoletic ceil proliferative disorders associated with at least 1 gene and/or their regulatory regions in a subject. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least 1 reagent, which distinguishes between methylated and non-methylated Organitation of the contacting a subject with at least 1 reagent, which distinguishes between methylated and non-methylated Organitation of the contact of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Lewin A,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Olek A,
Lewin A,
Pelet C,
                              hyphocytic lablachia and course measurements of the probes for determining the cytosiae methylatin degrous and/or single nucleotide polymorphisms (sweet) of haematopoiet season and/or single nucleotide polymorphisms (sweet) of haematopoiet season politication disorder related sequences and their complements and politication of haematopoietic cell proliferation disorder related by sequences from the present invention can also be used for detecting a prodisposition to the present invention and also be used for detecting a prodisposition to the present invention of the subclasses, disaposis, promposis, treatment of differentiation between haematopoietic cell proliferative disorders. The cremitoring of members had been a highly specific classification of hematopoietic cell proliferative disorders allowing for improved and informed treatment of patients.
                                                                                                                                                                                                                                                                                                                                                                      subject. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least i reagent, which distinguishes between methylated and non-methylated Cog disucle-betides within the target nucleic acid. ABZ09861 to ABZ01861 prepresent specifically claimed nucleotide sequences from the present invention. Oligonucleotides from the present invention. Oligonucleotides from the present invention can be used: for differentiating between healthy hematopoietic cells and proliferative disorder hematopoietic cells of proliferative disorder disorder hematopoietic cells of prolifer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a method for detecting and differentiating between hammatopoietic cell proliferative disorders associated with at least 1 gene and/or their regulatory regions in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Detecting and differentiating between hematopoietic cell proliferative disorders, comprises contacting a target nucleic acid with a reagent that distringuishes between methylated and non-methylated Cpc dinucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human, haematopoietic cell proliforation disorder; cytostatic; gene thorapy, lymphocytic leukaemia, acute myclogenous leukaemia, cytosine methylation state; probe; primer; as.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
                                                                                                                                                         This invention describes govel oligonucleotide primare or peptide nucleic acid (DNA) oligoners for detecting single nucleatide polymorphisms (SNP) and cytosine mathylation status in chemically pservas deginant DNA. The oligonucleotides are used for disposals and/or cytosposis country and a central nervous system, cardiovascular and metabolic disorders. The colligoners are also used for describing call type differentiation.

10190mcr are also used for describing call type differentiation.

10210mcr are persent the oligoners described in the inheriton.

10210mcr are specification, but was obsained in electronic format from part of the printed from the colligoners are placed to the printed from the colligoners obsained in electronic format from NIDO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Best Lo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invertion describes novel oligonuclectide primers or peptide nucleic acid (PRM, oligonucrs for detecting single nucleotide primers for self-morphisms (SNP) and cytosine methylation statings might ended the primers and an experiment of cancer and a range of diseases including immune system and or progness and respiratory, and central mercus system caldovascolar and metabolic disorders. The colligoners are also used for detecting call metabolic disorders. The oligoners are also used for detecting a manual system and an experimentation.

ARTHOOLIC ARTHOUGH TO present the oligoners described and the revention. NOTE: The sequence data for this patent did not from part of the primed specification, but was obtained in electronic format from him and the primed specification, but was obtained in electronic format from him and the contraction of the primed specification, but was obtained in electronic format from him and the contraction of the contractio

The oligonouslectides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gestrointestinal, respiratory a central nervous system, cardiovascular and metholic disorders. The contral nervous system stationary and cancer and a supplementation of the primary oligonars are also used for detecting cell type differentiation.

NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from MIPO at the printed for the printed for the printed for the printed for the printed formation of the print

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
nucleotide sequence which comprises a angiotensin receptor 1 (AGTR1) isosene selected from isosenes 1-8 and 10 given in the specification. Also included are methods of haplotyping/gencytying the AGTR1 gene of an individual, predicting a haplotype pair of an individual.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes novel oligonucleotide primars or peptide mundic acid (PRN) oligonucrs for detecting single mundectide primars for memory and control primars for the control primars of concert and a captural primars single mundecties and observed and a central nervous system, and control primars for the primars for t
                                                                                                                                                                                                                                                                                                                         Novel genetic variants of Angiotensin Receptor 1 isogenes, useful for improving efficiency and reliability in drug development for treating diseases associated with AGTR1 activity, e.g. hypertension .
                                                                                                                                                      The invention relates to an isolated polynucleotide comprising a first

Degenerate PCR primers were designed based on two highly conserved regions within the CDNA encoding a murine activin receptor, and and porcine TGF-beta type II receptor and the daf-1 receptor of celegans. The primers (see ANTSGOY2 and ANTSGOY3) were used for amplifying clones present in a 14.5 day focatal rate turgenital ridge CDNA COS cell expression library. Four clones encoding portions of four movel polypeptides (all puterity setting the excensive threadment kinases) where obtained and designated pGENT-Mistl, 2, 3 and 4. The inserts
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    family -

Misr1 is believed to encode an isoform of the rat Millerian Inhibiting Substance (MIS) receptor, while misr2A/misr2B, misr3 and misr4 are believed to encode momentic isoforms of the rat inhibin receptor and/or BMP receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      04-APR-1994;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                23-FEB-1995;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    31-AUG-1995

                                                                                                                                                                     CYP3A4 substrate, drug-drug interaction identification; boxin exposure, genetic linkage detection; phenotypic variation; PCR primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       potentially useful for treating rheumatoid arthritis, restenosis and asthma as well as for increasing colerance to transplanted tissues. The potential immunosupprosesive properties of a riboxyme that cleaves relh maNH means that uses are limited to local delivery, acute indications or as vivo treatment. (Updated on 25-MAR-2005 to correct PI field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           regulator NF kappaB and is implicated specifically in the induction of inflammarcry responses. Regions of the mRNA that do not form secondary folding structures and that contain potential hammerhead and hairpin riboxyme cleavage sites were identified by computer analysis. Riboxyme olivected against these mRNA sequences were responsed and synthesised with modifications that improve their nuclease resistance. The riboxymes are designed to cleave the target sequences and thereby inhibit rall, expression, making them
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Grimm S,

They can also be used to establish animal, cell culture and in vitro cell-free models for drug metabolism, Polymorphic CYPRA gene sequences can be used for expression suitable to determine the effect of promoter and/or intron sequence variations on mENA expression and stability. The polymorphisms are also used as single nucleoride polymorphisms to detect genetic linkage to phenotypic variation in activity and expression of PEPAA. The models acids can also be used to generate genetically modified non-human animals or sites specific gene modifications in cell lines.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              receptor, 10° binding protein [Graph] 2 or IGFBP3), which is capable of inhibiting or reducing growth factor mediated cell proliferation. Inflammation and/or other disorders. The present sequence is an oligomucleotide which can be used to design the antisense oligomucleotides of the present invention (see Aprilis) and Aprilis-19-18(1). The method is useful for amaliary the effects of psorialis, ichthyosis, pityriasis, ruba, pilaris, serborrhoes, kabids, keratosis, mophasis, selectedorma, warts, bening growths, cancers of the retina, brain or skin, growth factor-mediated malignancies, other selectic disease, kidney disease, hyperpediated malignancies, other totod vessels or any other hyperplasis, properties of the inside of
Ameliorating the effects of a disorder, e.g. psoriais, by antisense uncleic acid that inhibits or reduces growth factor mediated cell proliferation and/or infilamention:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             antisense therapy, antiproblicerative; antinflammatory, antiportatic; cytottatic; demandological; keloid; cytottatic; demandological; cardiant; virucide; ophthalmological; keloid; skin disorder; Insulin-like Growth Factor 1 receptor; 107-1; pittyriasis; 107 binding procedin; 107-19-2; 105/19-1; inflammaticin; psortasis; pilaris; growth factor mediated cell proliferation; inflamosticin; serborrhoes; ruba; kcratosis; nepjasis; schordoderms; wart; skin cancer; scleroric disease; hypernovascular condition; hyperplasis; kidney disease; neovascular condition of the retina; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         administering UV (ultra-violet) treatment (optional) and an antisense nucleic acid that inhibits or reduces growth factor mediated cell proliferation and/or inflammation -

Or the present invention relates to a method for ameliorating the effects of skin disorders. The method comprises contacting the skin with an cartisense oligonuclectide, (for Insulin-like scowch Factor [KGF]-1 creepptor, IGF binding protein [IGFB-1-2 or IGFB-3], which is capable of inhibiting or reducing prowch factor mediated cell proliferation, crinilammation and/or other disorders. The present sequence is an expectation of the present invention (see Anvals1) and crollogonuclectides of the present invention (see Anvals1) and crollogonuclectide of the province of the crollogonuclectide of the province of the crollogonuclection of the province of the crollogonuclection of the control of the province of the crollogonuclection of the crollogonuclection of the setting brain or skin, proveh factor-mediated analignancies, other selection disease, kidney disease, hyperproliferation of the inside of selection disease, kidney disease, hyperproliferation of the inside of selection disease, kidney disease, hyperproliferation of the inside of selection disease, kidney disease, hyperproliferation of the sisted of skin of the crollogonuclection of the selection disease, kidney disease, hyperproliferation of the sisted of the selection disease, kidney disease, hyperproliferation of the sisted of the selection disease, kidney disease, byte province of the selection disease, kidney disease, byte province of the selection disease, kidney disease of the selection disease, kidney disease of the selection disease, kidney disease of the selection disease.

                       The present invention relates to a method for amalicating the effects of skin disorders. The method comprises contacting the skin visit and antisense oligomacleokide. (for Insulin-like Growth Racher [169] h. antisense oligomacleokide.) [160] h. antisense oligomacleokide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antisense therapy, antiproliferative, antinflammatory, antiportatic, cycostatic, dermacological, cardiant, varucide, ophthalmological, keloid, skin disorder, insulin-like Growth Factor I receptor, IGP-1, pittylasis, IGF binding procein, IGEP-2, IGEPS-1, inflammator, psoriasis, pilaris, growth factor mediated cell proliferation, ichthycais, setborrhoe, ruba, keratocsis, medyalasis, sctoroderms, watt, skin cancer, sclerotic disease, mysermeovascular condition, hyperplasia, kidney disease, meovascular condition by the retina, ss.
                                                                                                                                                                                                                                                                                                                                                  Ameliorating the effects of a disorder, e.g. psoriasis, by administering UV (ultra-violet) treatment (optional) and an antis nucleic acid that inhibits or reduces growth factor mediated cell proliferation and/or inflammation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antisense oligonucleotide, (for Insulin-like Growth Factor [IGP]-1 receptor, IGF binding protein [IGFBP]-2 or IGFBS1), which is capals of imbibiting or reducing growth factor mediated cell proliferation, inclammation and/or other disorders. The present sequence is an oligonucleotide which can be used to design the antisense oligonucleotide of the present invention (see AMP45151 and Oligonucleotides of the present invention (see AMP45151 and AMP45153-P45161). The method is useful for ambitrating the effects of paperiasis, ichthyosis, pityriasis, ruba, pilaris, setborrhoea, keloider,
inflammation and/or other disorders. The present sequence
                                                                                                                                                                                                                                                                            Example 7; Page 51; 201pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (MURD-) MURDOCH CHILDRENS RES INST
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   21-JUN-1999;

The present invention relates to a human or humanised antibody (bb) which specifically binds to fibroblast activating protein alpha (FRelpha). The antibodies are useful for preparing a composition for the treatment of cancer, and for imaging tumours associated with activated stronal fibroblasts, such as colorectal cancer, non-small-sell lung cancer, breast cancer, head and neck cancer, ovarian cancer, lung cancer, bladder present cancer, the cancer of the canc

dancer, pancreatic cancer and metastitic brain cancer, and diseases associated with bhe same, such as inflammation and wound healting. The present sequence is a coding sequence described in the exemplification of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             oligonuclectide which can be used to design the antisense oligonuclectides of the present invention (see AMP45151 and AMP45153-R45161). The method is useful for ameliorating the effects of AMP45153-R45161). The method is useful for ameliorating the effects of psoriasis, inchityusis, pityriasis, ruba, pilatis, setborrhoea, keiboids, keratosis, neophasias, soletroderma, warts, benign growths, cancers of the skin, a hyperneovascular condition such as a neovascular condition of the retina, brain or skin, growth factor-mediated malignancies, other soletroic disease, kidney disease, hyperproliferation of the inside of blood vessels or save other wheense, hyperproliferation of the inside of
                                                                     New human humanized antibody that specifically binds to fibroblasts activating process alpha, useful for treating ceneer or tumor, and for imaging tumors associated with activated stromat fibroblasts, e.g. lung

                                                                                                                                                                                                                                                                           The present invention relates to the coding sequence of human Creeml, which is a protein containing a regestitive 86 amino acid anotif. The protein is a transcriptional control factor, and is a conjugate of retinoblastoms protein (8b). The present sequence is the an intron-exon junction in the coding sequence of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes nucleic acid molecules which modulate the synthesis, expression and/or stability of a mRNA encoding I or more receptors of vascular endothelial growth factor (MEGP). A patient (preferably human) having a condition associated with the level of the fms-like tyrosine kinase I (filt-I), kinase inspert domain containing receptor (KDR) and/or foetal liver kinase I (fik-I) (e.g. tumour angiogenesis, cular diseases, psoriasis and themancoid arthritis) can be treated by administering the nucleic acid molecule or the patient. AMAG7275 to AMAT552 responsent specific examples of nucleic acid molecules from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mudiaic acid moderule modulating VBAF receptor(s) gene expression or mRNA stability - useful for treating e.g. rumour aggiogenesis, psoriasis, rheumatoid arthritis, etc., in a human patient
                                                                                         28-DEC-1989

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        An oligopeptide fragment of native enzyme GO from A. nigez was purified and the mains acid sequence determined. Probe 7 was made from the region of lowest degeneracy. It has 48 fold degeneracy. Although it was designed to enable detection of cDNA sequences encoding GO in a lambda glul library, it was not found to be useful for detecting such clones. GO that is produced by the method of the patent is free of conteminants, esp. highly allergenic Aspergillus niger organisms. The high cost of purificm. is avoided.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
                                  the synthesis expression and/or reability of a mRNA encoding 1 or more receptors of wascular emochabilal shows heartor (1939). A patient (preferably human) having a condition with seconded with the level of the fine-like tycothine kinase [fit-1] his second meet domain containing receptor (1938) and/or fostal liver kinase [field.]). It is good to consider the receptor (1938) and/or fostal liver kinase [fit-1] this good the containing receptor (1938) and/or fostal liver kinase [fit-1] this good to contain the containing receptor (1938) and/or fostal liver kinase [fit-1] this good to contain the containing receptor (1938) and for fit is contained to contain the containing receptor (1938) and for fit is contained to contain the containing receptor (1938) and for fit is contained to contain the containing receptor (1938) and for fit is contained to contain the containing receptor (1938) and for fit is contained to contain the containing receptor (1938) and for fit is contained to contain the containing receptor (1938) and for fit is contained to contain the containing receptor (1938) and for fit is contained to contain the containing receptor (1938) and for fit is contained to contain the containing receptor (1938) and for fit is contained to contain the containing receptor (1938) and for fit is contained to contain the containing receptor (1938) and for fit is contained to contain the containing receptor (1938) and for fit is contained to contain the containing receptor (1938) and for fit is contained to contain the containing receptor (1938) and for fit is contained to contain the containing receptor (1938) and for fit is contained to contain the containing receptor (1938) and for fit is contained to contain the containing receptor (1938) and for fit is contained to contain the containing receptor (1938) and for fit is contained to contain the containing receptor (1938) and for fit is contained to contain the containing receptor (1938) and for fit is contained to containing receptor (1938).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mucleic acid molecule modulating VEGF receptor(s) gene expression or mRNA stability - useful for treating e.g. tumour angiogenesis, paoriasis, rheumatoid arthritis, etc., in a human patient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the synthesis, expression and/or stability of a maxim accoding for the strain and associated which is a condition of more presented by the partial of more presented to the partial of the fine-like tyronine kinese | firt | kinese careed with the level of the fine-like tyronine kinese | firt | | fir
                                                                                                                                                                                                                                                                                                                                                           The present invention describes nucleic acid molecules which modulate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 4; Page 83; 218pp; English.
